LICENSE AGREEMENT

TI-BAR ("this software") is licensed for the exclusive use of the original purchaser ("you") for use on one computer only, that you normally own. TI-BAR is not fairware, shareware, freeware, public domain, or any similar software designation. It is **COPYRIGHT COMMERCIAL SOFTWARE.**

This software is not copy protected. CECURE ELECTRONICS INC. authorizes you to make backup copies of the software for your archives only - for the sole purpose of protecting your investment from loss.

You are free to move this software from one computer you own to another computer you own, so long as there is no possibility of its being used at more than one computer at one time, unless you have purchased a SITE LICENSE that allows multiple usage.

You may not **LEND, RENT, LEASE, SELL, TRADE, DISTRIBUTE,** and/or **GIVE** this software to any person, business, machine, computer, etc.

You may not **REVERSE ENGINEER, DISASSEMBLE,** and/or **EDIT** the software except as provided in the setup menu in the main program.

If you sell your computer, you may not allow the **TI-BAR** program to go with the computer; ie, it must be **REMOVED** from any hard drive(s), backup copies, and/or the original disk in such a way as it would be impossible to recover. This may be done by either reformatting and/or bulk erasing.

Any violations of the **LICENSE** will terminate the **LICENSE AGREEMENT** and may subject you to criminal penalties and costly civil damages. Please understand that you only own the disk, not the software on it. If you have any questions as to what you may or may not do, please write to or call Cecure Electronics Inc.

ACKNOWLEDGEMENTS

We would like to take the time to thank the following people whose efforts made this program possible.

Bill Hoehnen the main BETA TESTER. His suggestions helped shape the programs look. His trips to the United States Post Office, were responsible for the fine tuning of the BAR CODE, so it would pass the Postal Quality Control for the size, contrast, spacing, etc. The Milwaukee Area TI 99/4A Users Group is very fortunate to have him as a member.

These people were kind enough to test out the program on their printers and gave feedback as to the compatibilty with the various types that are in use.

FIRST MAKE A BACKUP COPY

CAUTION – your printer may not recognize certain commands in this program set. The programs for printing were developed for the Epson (emulation) mode on a nine pin PANASONIC printer, XP1091.

These programs (ADRENV2PAS, ADRENV4PAS and ADDRESLIST), include REM statements listing the line locations and purposes for the printer commands. These you may change as required for your printer.

BIT IMAGE mode is used here for printing barcodes in the envelope printing programs.

Files of mostly fictitious names and addresses are included for trial runs. (I've left the first one blank except for return address). The purpose for this series is to allow for the occasional printing of names and addresses on either legal or letter size envelopes with Sender's name and address in the upper left corner.

This program is arranged to store up to twenty names and addresses of people and organizations, (Sendees), for whom you can address envelopes. (Note that more than twenty names can be handled by multiple use of this program on several disks with separate files).

The Sendees' data may be entered in any order and will be placed in sorted order (alphabetic or otherwise) before being recorded. (Please note that you are including an extra entry on which to sort). The Sendees' names are numbered, shortened and listed to screen to give printing choices. After printing has started, you may continue as long as you wish to complete your run of envelopes, adding more blank envelopes when needed. Bar coding on envelopes is included in two options. For faster printing use two pass bar coding. Darker result scan be had with four pass bar coding.

NOTE:
Brand new ribbons will normally give best results with two pass, while old ribbons will give similar results with four pass.

Sendee envelope line for Address / P.O. Box No. may be used for other purposes with 5 digit bar coding. (9 digit bar codes may be in error). Usually, Military & foreign addresses are not designed to work with bar coding.

Facilities are included to allow for the Sendees' data entries to be revised, replaced or deleted on an individual basis. The Sender entry may be changed or replaced in a similar manner. Additionally, on this disk, using existing data files, is a program, ADDRESLIST, that will list your Sender and Sendee names and addresses on one 8-1/2 X 11 printout.

PRINTERS THAT ARE KNOWN TO WORK WITH THIS PROGRAM
