\* Addendum \*

To skip the introduction: HOLD DOWN any key as the stars are coming on and release it when the copyright is displayed.

Because this program is constantly saving data, DO NOT cover the write protect notch. Doing so will result in a warning message when the game is booted up.

CAN YOU SAVE YOUR WORLDS?

by: Chris Bodenmiller

☐ ☐ Astro-Mania ☐ ☐

Instructions

Use the joystick to move as follows:

Up and down on side views.

Left and right on top views.

Hold down the fire button to shoot.

Hold down 'P' to pause the game. The screen will flash and all motion and sound will stop.

The special continue/save feature is automatic. Simply select it from the main menu. If you have not yet played the game select start from the menu.

Your planets have been trapped by the Frizoid invaders. Only your squadron of ships is outside the forcefields surrounding your planets. You must defeat the guard ships and save the planets from the Frizoids. Then you must fight the mother ship. Do you have the courage to face the Frizoids, or will your worlds be lost forever.

You earn extra ships and points for passing each level. There is a secret on the menu screen. Something about pushing the right button... I can't remember but maybe you can figure it out.

Please run the program labeled IMPORTANT. Note: This program does not necessarily reflect the views of the dealer this software was purchased from. It reflects the views of Bodenmiller Computers. This is a special tract telling you the story of salvation.

I hope you enjoy the game.
