MEMBERSHIP FEES

FULL MEMBERSHIP	$30.00 / year
NEWSLETTER SUBSCRIPTION	$20.00 / year

All memberships are household memberships. An newsletter subscription is only for those who do not wish to attend meetings, but wish to receive our newsletter and have access to our library. You are welcome to visit one of our general meetings before joining the group. If you wish more information contact either our president, in writing, at the club address on the front cover or phone him.

The meetings are usually held on the last Saturday of each month, unless stated otherwise. Consult this issue of Newsletter 9T9 for the date and time of the next meeting. Meetings are held in the main auditorium of the Gregory Public Library, in the city of York, from 9:30 AM to 1:00 PM. The library is located at 120 Trowell Ave., 5 blocks south of Eglinton Ave., 1/2 Block East of Keele St. Our BBS, The TI Tower BBS # (416)921-2731, 300/1200BPS, 24 hrs.

COMMERCIAL ADVERTISING

Any business wishing to reach our membership may advertise in our newsletter. The rates are as follows. (width by height):

FULL PAGE	(7" x 10")	$50.00
HALF PAGE	(7" x 5")	$25.00
QUARTER PAGE	(7" x 2 1/2")	$15.00

Please have your ads camera ready and paid-for in advance. For more information contact the editor.

Don't forget, that any member wishing to place ads, may do so free of charge as as long as they are not involved in a commercial enterprise.

NEWSLETTER ARTICLES

Members are encouraged to contribute to the newsletter in the form of articles, mini programs, helpful tips, hardware modifications, jokes, cartoons and questions. Any article may be submitted in any form by mail or modem. We welcome the reprinting of any article appearing in this newsletter providing credit is given to the author and 9T9. If more information is required, call the editor. The names 9T9, Nine-T-Nine, Newsletter 9T9, 9T9 Users Group, and Nine-T-Nine Users Group are Copyright,(c), by the 9T9 Users Group of Toronto, Canada, all rights reserved.

DISCLAIMER

Opinions expressed in this newsletter are those of the writers and are not necessarily those of the 9T9 USERS' GROUP. 9T9 cannot assume liability for errors or omissions in articles, programs or advertisements. Any hardware modification or project is presented for informational purposes, and the author, newsletter editor, staff and/or 9T9 Users Group cannot be held liable for any damage to the user's equipment. All such projects are done at your own risk!

THE FOLLOWING CAME FROM DELPHI, AND WAS MODIFIED TO HIGHLIGHT 9T9 USERS GROUP MEETINGS FOR 9T9 DATES TO REMEMBER

***************EDITED BY STEVE MICKELSON*******************************

TId Bits #15

This, the first issue of 1988, may seem more like an issue of "The Book of Lists", than a newsletter. We have lists of the contents of both our software and newsletter libraries. Hopefully, you will find them useful resource material.

A reminder, to those who somehow missed the notices last month:

–>MEMBERSHIP RENEWALS ARE DUE, NOW!
–>ELECTIONS ARE THIS MONTH, JAN.30!
–>BOB BOONE WILL BE AT OUR NEXT MEETING
–>WE MEET AT THE GREGORY LIBRARY, THE LAST SATURDAY OF EACH MONTH, CIRCLE THE DATES ON YOUR CALENDER'S
–>OUR BBS IS THE TI TOWER, WHICH CAN BE REACHED AT (416)921-2731,24 HRS

A look at our budget, indicated that the clubs expenses were offset by the sale of club software, that otherwise we would be in the red to the tune of $400.00. As sales of software have dimished lately, and since it is better to err on the side of caution, we will be cutting back the issues of our club newsletter a couple of pages or so, per issue. As postal costs are a substantial factor,(to the tune of more than $50.00 per month, the executive agreed to bring for discussion at the next meeting, a return of the policy of bringing the newsletter to the meetings for pick-up, and mailing-out issues to members absent from the meetings. If we have 20 issues picked up each month, the savings could amount to over $100.00 a year, based on the current costs of mailing 10 issues to 20 members. This is part of a resposible caretaking of the clubs finances.

Though we exchange with a number of clubs, we will maintain contact, as other letters are a valuable source of articles and information. I have, personally, supported the newsletter through downloading articles, to a tune of $20. to $40. a month. This, too, will be reduced. An effort will be made to get newsletters to me A.S.A.P., so useful articles can be transcribed, before they become stale. Also, the sooner I get them, the sooner I can photocopy them for Steve Findlay to include them in our library and permit Blair "Fast-Keys" MacLeod time to transcribe them for editing. As many of the articles we get are either poorly printed or second and third generation photocopies, in the first place, transcribing them makes a difference for readibility.

We are looking for the following, for our club:

Volunteers to critiqe and review programs from our club library, for Newsletter 9T9, contact either Andy myself.
Volunteer to maintain and update our cassette library must attend meetings on a regular basis, we will arrange to provide new software updates.
No longer needed/used TI cartridges for our club library.
Volunteers/suggestions for hardware tuitorials/

demo/s tell others about what you like/dislike about that piece of software or how you fixed that hardware bug, contact us.

That wraps it up, I, also, included a letter from Ron Albright, addressed to both fellow 9T9ers and myself. Until next month, keep the TIger in your tank!

TI FORUM T.M.

Ontario, Canada M6M 1C9

Dear Steve,

As I (and Jonathan) begin our third year writing the Computer Shopper's TI Forum column, we would be remiss if we did not take the opportunity to thank the very ones who make the column a success. Besides the readers themselves, the main source of "inspiration" and information is you - the TI Users Group. The groups who put out the marvelous newsletters we see each month are a never-ending light in the TI community.

We hope you continue to support your TI Forum. Even more, we hope you continue to enjoy it. We wish you, the 9T9 Users Group, continued success, and each member personal prosperity and happiness in the New Year (yes, I really am writing this New Year's Day). I marvel always at your ingenuity, courage, dedication, and generosity - both with your time and your talents. It is your gifts and skills that have kept the 99/4A community alive long past the funeral arrangements were made.

Steve, your group's newsletter is CONSISTENTLY one of the best I receive. Thanks for sharing all your expertise with our readers.
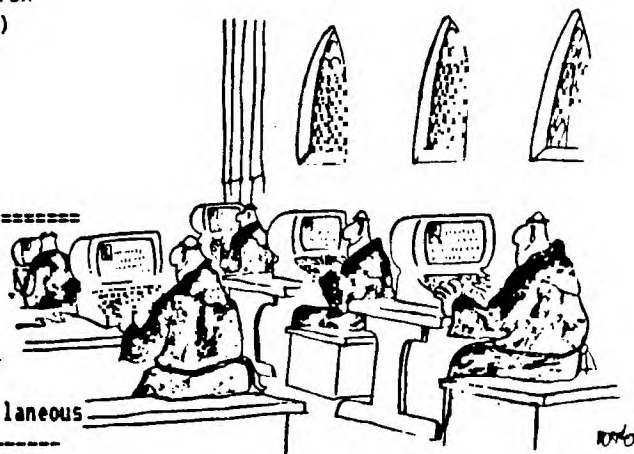

Again, to the 9T9 Users Group, all the best and our heartfelt thanks for all your support.

Sincerely,

Ron Albright

9640, WHO CARES?

An editorial about the Geneve and the TI Community:

-By Steve Mickelson

As both newsletter Editor and TI user, I have the opportunity to speak with many TI users and to read many editorials and comments in the various newsletters, databases, and BBS' re: the state of our computer and where the future will lead us. I am disturbed by much of the "negativism" which seems to exist amongst many users re: the Myarc and the 9640, Geneve, much of which seems to reflect either an ignorance of the product or a totally unrealistic understanding of the financial resources of Myarc and the costs of producing a computer and software in the TI market place.

The costs of developing computer hardware today can be prohibitive. Many Geneve critics somehow expected Myarc to introduce the Geneve and its operating system software, simultaneously. Any one with any knowledge of software knows that you cannot write software until the hardware exists. And that such software will take time. Also, the fact that first Geneve software consisted, initially, of TI-Writer and Multiplan in 80 columns, with a modefied GRAM Kracker-type loader. The Atari ST had no, I repeat no initial software. So what's big deal? It seems that these critics, want no compatiblility with 4A software, if you follow their line of so-called logic. Just who's computer do they support, anyhow?

It was exactly one year ago, that I wrote an editorial, whereby, I drew the analogy of the TI community being like the passengers aboard the TItanic, abandoned by its crew,(TI), and in danger of sinking from the flood of words among the "99/4A" vs "9640" camps of survivors. The only apparent alternative, seems to abandon ship and move to another computer, which is not an orphan. Many of those who stay with TI, seem content to fly the "Jolly Roger" and pirate everything in site.

Also, many critics of Myarc, seem naive enough to mis-interpret Mr. Philips dress,(3 piece suits and clean-cut appearance), "pegs" the man in the category of TI. Since he dresses-well, and acts with business-like decorum, certainly he must have the Mega-bucks to blow, to hire software writers for $30-$40,000 a pop, as TI did, for ready to use, spam-in-a-can software. When the community sees him taking a grass-roots "appeal to the user for software", approach like Atari ST and Mac-makers did, lynch mobs form. If only he wore a pizza-stained sweat shirt and jeans, then perhaps they be more accepting of buggy operating systems, as users had done with the V7.1 O/S for the one Meg, Horizon RAMdisks! Or, better yet, why not ignore the errors of Corcomp, extend Myarc's line-of-credit and push his fledgling company to the brink of bankruptcy, to meet the demands of users and nonusers, alike, for instant software gratification? Why can't he be as foolish as some of our expectations?

It should be recognized that the TI User Group network post-poned the computer's inevitible demise. This community has become accustomed to one computer for five or so years, and thus inured to the 4A's limitations. The continued desire for cheap and easy software, spurned revival from a compatible, with many TI Guru's recommending users switch to IBM, Apple, Commodore, Atari, or anybody else, preferring to wallow in self-pity, as an "orphan", than to see the success and succession of a new 9900-series computer. Many, in the community seemed to forget the "incompatibility" between bare consoles with tape-memory, and expanded,(32K/Extended BASIC,Disk Controller Cards), TI-Systems. And, no thought has been given to the need for modified software to operate a Horizon RAMdisk, or how many cartridges did not behave properly, or how some disk utilities did not perform, with the Corcomp disk Controller. What about the hardware,(pin-out), differences, when one purchased a Corcomp or Axiom interface, etc.,etc.etc. To me, the 9640 is just a faster, 80-column TI-upgrade, with a greater RAM. You the user have no obligation to buy one, any more than others have to buy a HRD, or for those with consoles, do to get an expansion system.

Final conclusions, may put the blame on the TItanic, squarely on the shoulders of the users, who instead of puiling for the common survival of the community, at-large, fought amongst themselves and let the pre-occupation with "Myarc bashing" versus "Myarc support" destroy the community from within, like a cancer. A community, many of whom,

Have we forgotten that even the "TI-creator" had problem childeren as the early 99/4 and console BASIC, not to mention cartridges, which used only cassette, thermal printers or had no method to I/O or print data. And such software was locked in GROM space. Perhaps this attitude among many users did more to push TI to abandon the 99/8 and 99/2, than any influence exerted by the forces the market place.

If you don't get the drift of what I saying; bluntly, it's I, personally, cannot see why someone such as Lou Philips, wastes his time and money on a community which has so many ingrates, who couldn't recognize something positive if it slapped them smack between the eyes. Are these individuals really as stupid as their remarks seem to indicate? That is to say, do they really think Lou Philips has the backing of TI, Yamaha, or some wealthy investor syndicate; and is just too cheap to spend some of the billions of imanginary R & D bucks on his software? Are we, as users, too dim-witted to see that IBM sold a million units of its O/S 2, introduced about the same time as the Geneve, before bringing out an O/S 2 Operating System with none of the knashing of teeth amongst the IBM ownwers; and still expect Myarc, operating in a dead-end market to have the finances to get software out in a shorter period of time than Big Blue? Let's be realistic in our expectations of any third party manufacturer. Perhaps TI listened to the carping from such users, and for that reason alone, pulled the plug on the home computer market.

While the 9640 may not be the key to the survival of our ever-shrinking community, the negative non-constructive criticisms against the clone or its small,(small compared to TI), manufacturer and unhealthy bickering amongst various camps of users will only drive more nails into the TI coffin, you better believe it ! So, the next time you have critism about Myarc, or any other, supporter of the TI orphan, keep it constructive or to yourself. Let's save those negative words for those "other" computers and help promote a positive attitude within our community, which is the key to our orphans continued survival. After all, we're in this boat together!

HARDCOPY

- By STEVE FINDLAY

Due to the length of this months' column I will keep it short. I have included a full listing of the HARDCOPY library. This listing includes books, other club's newsletters and magazines. A yearly listing to show all the new additions should be enough to keep the membership aware of what is available. Any new additions will be mentioned in the monthly columns.

New additions to the newsletter binders have been coming in large volumes and widely spaced apart. I will not rearrange the binders to accommodate grouping of individual User Group newsletters (due to overstuffing of the binders) until the end of each year. That way, anyone borrowing the binders during the year can take out additional binders without fear of reading the same newsletters over and over.

I will also have a listing of the library contents at every meeting for everyone's perusal. This will allow a quick glance approach for items that may be of interest.

It has come to my attention that there is a book out there that someone borrowed before I took over the HARDCOPY LIBRARY that has not been returned. I hope I can count on that person's honesty to restore it to it's rightful place. The book is called THE ORPHAN CHRONICLES. If anyone has seen this book please let me know at the next meeting.

I would like to take this opportunity to thank the following people for their generous donations to our "HARDCOPY" library. Stan Lemon for a number of 99ER magazines and a book (BEST OF 99'ER). Nigel Boubert (the founder of the TORONTO TI USERS GROUP) for the large quantity of 99ER and HCM magazines along with a book (PROGRAMS FOR THE TI HOME COMPUTER). Mark Gregory for the copy of COMPUTES' BEGINNERS GUIDE TO ASSEMBLY LANGUAGE ON THE TI-99/4A. THANK YOU one and all!

Speaking of Mr. Boubert. Nigel has pasted along a list of TI cartridges and hardware that he is trying to sell. If you are interested I will have that list at the club meeting and will pass the telephone number to anyone who wants it.

```

Hopefully Alain will remember to bring back the item he borrowed from the
library at the next club meeting, otherwise his name will remain in the HALL OF
SHAME until he does so.

I really didn't think I would need the HALL OF SHAME drawing this soon so I did
not have a drawing ready. Perhaps I can manage to do that in the coming month.

9T9 LIBRARY listing and notes if any.   Compiled by Gary Bowser on Dec. 9 1987

   Disks have a nominal fee of $2.00 per disk (includes disk and handling).
All disks are available by mail, send cheque or money order with a list of
disk numbers, to the club's address. Also disks are also available at any
of the 9T9 User Group meetings for $2.00 (includes disk) or $1.00 if you
supply the disk at the meeting.
There is also a DOM Disk of the Month that is available at every meeting or
by mail for $3.00 for a 1-SIZE DOM or $5.00 for a 2-SIZE DOM. Both prices
include disk and handling.

===

DISK code:

A - Art displayers/makers/pictures   C - Catalogs of software/hardware
D - Disk managers/editors/catalogers   E - Educational
G - Games   H - Home and financial
I - Instructions   J - Junk miscellaneous
M - Music players/makers   P - Program languages/helpers/routines
S - Speech writers/players   T - Terminal emulators/dialers/BBS's
U - Utilities   W - Word processors/helpers/sorters

TYPE code:

ART - TI-ARTIST and GRAPHX pictures   EA   - Editor/Assembler loader and 32K
EAXB - E/A or Extended Basic with 32K   FRTH - Forth
MM   - Mini Memory needed   MP   - Multiplan templates
RLE - Run Length Encoded pictures   TE2 - Terminal Emulator II speech
TEXT - Dis/Var 80 files   XB   - Extended Basic
XB32 - Extended Basic with 32K   XMEM - Extended memory i.e. 128K,etc.
GIF - Graphics Interchange Format   9640 - GENEVE MYARC 9640 programs

SIZE is the number of disks needed.
VER. is the version of the program
DATE is when the program or update was added to the library.

DISK	PROGRAM	SIZE	TYPE	VER.	DATE
