# CROSSROADS 99'ER USER GROUP

Meeting <i>No Meeting</i> 1984	7:30 P.M.	York Middle School Rm. 300
Vol II No. 7	P.O. Box 203	York, NE 68467

President Bill Hardy	Vice Pres. Dave Rich	Sec./Treas. John Mohning	Prog. Chm. Pat Pfeifer	Lib. Chm. John Linn
-------------------------	-------------------------	-----------------------------	---------------------------	------------------------

### PRESIDENTS CORNER:

Hope everyone had a nice 4th of July and you're enjoying the summer. I'm finding it hard to get jobs done, so this will be a late and short newsletter.

Don't forget I need information on what you want to see in the newsletter and do at the meeting, so write it down and bring to the Sept. meeting.

Crossroad's 99'er Users Group receives a monthly newsletter from 99'ers Users Group Association. To continue receiving them a contribution of \$12 is needed to cover the cost of their newsletter. I've talked with the other officers and we agreed to send them a contribution as the newsletter has improved and includes good information. The June copy has 15 pages of small print so I have copied parts that I feel the Group would be interested in reading.

The first two paragraphs of "What's Happening?" describes the problem of getting information to members. Alot of information is received from Users Groups and venders, but it cannot be copied and sent to each member, because of the cost and time, but it will be available through our library and at the meeting before being turned over to the library.

Adenda No meetings in July and August.

### TRADE/SWAP/SELL/BUY

If there are items you want to trade, swap, sell or buy, send a list and description to the newsletter and it will be included in the next newsletter without charge.

MONTHLY NATIONAL NEWSLETTER

VOL I - NO. 7 - 5/84

CREATED FOR TI-99/4A OWNERS AND USERS GROUPS BY THE

99'ERS USERS GROUP ASSOCIATION  
3535 SO. H ST., #93  
BAKERSFIELD, CALIF. 93304  
(805) 397-4361  
DON VEITH - EDITOR / PRESIDENT

WHAT'S HAPPENING ?!

Some very distressing news has been forwarded to me. Letters have been received that this newsletter has not been made available to the general membership of some Users Groups. The purpose of the 99'ERS USERS GROUP ASSOCIATION NATIONAL MONTHLY NEWSLETTER is the dissemination of information to all 99/4A owners. Information contained in the newsletter is to be made available to ALL USERS GROUP MEMBERS.

My purpose here is not to identify or criticize any specific Users Groups, but to make everyone aware of the purpose of this newsletter. We strive to provide articles of interest for everyone. A great amount of effort on the part of sixteen (16) people make this newsletter possible. I hope the Users Groups make the contents of this newsletter available to their membership. This newsletter is for all Users Groups members, not just a few insiders!!

I received a letter on May 2, 1984, from Morningstar Software. The firm has agreed to make their CPM System available to our organization for evaluation. The letter stated that the firm would be shipping the CPM card in about three weeks. Morningstar Software is very interested in working closely with the Users Groups. We shall keep you updated as the firm makes information available to us.

This issue has articles from our regular contributors John Phillips, Jim Vincent, and Jim Peterson. Product reviews on SST Software's BASIC COMPILER, THE MISSING LINK, and Games from VIDEO MAGIC have been completed and written. Several books were forwarded from Hayden Book Company for review. Reviews on the books will start with the June, 1984 newsletter.

BITS 'N' BYTES

This space will be used for last minute items that arrive just prior to mailing the newsletter.

Jim Digan of Englewood, Florida is interested in contacting other handicapped users and forming a group. Jim is also interested in obtaining programs created for or by other handicapped users. The 99'ERS USERS GROUP ASSOCIATION believes we should support this effort and provide as much help as possible. Please contact Jim at:

JIM DIGAN  
625 ENGLEWOOD RD., APT. 5  
ENGLEWOOD, FL. 33533

NAVARONE INDUSTRIES has a unique new service available. Their RENT & PLAY club allows you to rent a game cartridge for \$9.95. You are allowed to keep the cartridge as long as you wish until a different game is desired. There is a lifetime membership fee of \$25.00 to join the "GAME OF THE MONTH" club. For further details, contact the firm at:

NAVARONE INDUSTRIES  
510 LAWRENCE EXPRESSWAY, # 800  
SUNNYVALE, CA 94086  
(408) 866-8579

TI THOUGHTS FROM TERRI

BY TERRIE MASTERS, PRESIDENT - LA 99ERS COMPUTER GROUP

Happy May to everyone. These past few weeks I have had the pleasure of meeting T.I. owners and users beyond my own geographical range, face to face. What a nice happening. Up to now most communication has been through the mail, usually in response to a column in our newsletter. I made a fast trip to England, contacted, and met Clive Scally of TI#TIMES. We had a telephone chat followed by a luncheon meeting in Sutton. Clive is uniting the English TI owners via his newsletters. It seems they are too distant geographically for Users Group meetings. I purchased several of the local computer magazines, none of which is dedicated to TI, but some comments and programs do appear. The worst part is the difficulty in getting both hardware and software. It is great to have the machine but sad not to be able to use it to its capacity. I

wonder if across this world, we who have a rich supply of software and hardware might consider "adopting" an English user on a one to one basis and establish a pen-pal computer friendship. It would not be that great an expense to once in a while send over a cassette or diskette with programs, marking it an unsolicited gift under \$15.00 so no import duty or tax would be assessed. If anyone is interested in such an exchange, please contact me and I will set it up with Clive. He, by the way, is a delightful person and very into his TI. Hopefully he and his family will get over here and be our guest.

My next direct experience was in Bakersfield, where I was the dinner guest of the TEX-BUG Users Group, prior to attending their meeting. Again a great experience. Don and Luci Veith are real fine hosts, and the group has a lot to be proud of. I have previously met handicapped users, both visual and audio, in Bakersfield they have both hearing impaired members and teachers of the handicapped. This computer is a great tool for persons with a handicap, and it warms my heart to see teachers using this tool as they do. Perhaps more groups will publish the programs created for and by these fine people and can be shared on a wider basis.

Another user I met there is very electronically fascinated by the workings of the machine, I am sure that it would be to all our benefits if persons with this area of interest were to know one another and put great minds working together. Many good things can come of such a relationship. I would like to see other groups look beyond their geographical area and reach out. Put it into your newsletter and we will pick it up, or contact us directly. Milwaukee is reaching out for FORTH, I think that is great. We can only learn from one another, but first we must reach out and share.

My next visit will be to the Decatur, Illinois group. I look forward to that having had a very short but good meeting with Joe McMahon, the President of the group. We have shared ideas and will now expand that by becoming more involved. Our own club has a lot to learn from other groups, and I am very happy to be able to travel to other areas and do so. I wish to extend an open invitation to any member of any club passing through Southern California to call me directly at (213) 271-6930. I will happily give you the schedule and location of any club in our area that may be meeting when you visit and invite you to join us for an evening. Thank you for spending this time with me, and hopefully one of these days we too can meet face to face.

#### ANNION HELPLINE

Annion Software of San Francisco has established a helpline for TI-99/4A owners. Dr. Guy-Stephan Romano is available to answer any question about the 99/4A, provide information on hardware and software quality, and sources where both may be obtained. Dr. Romano may be contacted by telephone or letter. The firm requests that each written inquiry contain a self-addressed, stamped envelope for the purpose of returning your answer. The Helpline service is free to everyone whether you own or use their software or not. You may contact Dr. Romano at:

ANNION HELPLINE  
116 CARL STREET  
SAN FRANCISCO, CA. 94117  
(415) 753-5581  
HOURS: 9AM TO 3PM MON-SAT

#### TI FORTH PRINTER OPTION CHANGE

For those who have gotten a copy of TI FORTH from the library and found that as written, the only printer option supported is serial at 9600 baud, take heart. The change for other printer options is not hard. Enter an edit mode and call up SCREEN number 72. Then "arrow" down to line number 4, change the string after F-D" to the printer option you need. For instance, PIO for the parallel port or change the baud rate from 9600 to whatever is used by your printer. Use the same "names" that are used by TI BASIC. Delete any unused parts of the old name, but leave the quote (") at the end. While you have SCREEN number 72 on your screen and are in the edit mode, look at line number 5. The copy I have has a typo in it and the "SWCH" did not work.

All that you have to do is change the following:

old  
PAB\_ADDR VSBW

to  
PAB-ADDR VSBW

With the above change all it takes to send text or data to the printer is the word SWCH. The preceding article was authored by Ted Michelson. It was taken from the May newsletter of the Rocky Mountain 99'ers, TIC TALK.

SOFTWARE REVIEW - ASSEMBLY LANGUAGE GAMES - BY JOHN PHILLIPS OF VIDEO MAGIC  
GAME TITLES - STAR TRAP, BEYOND SPACE, D-STATION I AND II  
BY DON VEITH - EDITOR, PAUL FULLER - STAFF ANALYST

Many of our Assembly Language readers will be familiar with John Phillips from the monthly articles he writes for our newsletter. John was a Programmer for Texas Instruments in the Home Computer Division. While working for TI, he was responsible for development of the Mini-Memory Module. He also worked on Hopper and aided in solving problems on several other pieces of software. John has since left TI and started his own company VIDEO MAGIC.

The four games reviewed by our organization were STAR TRAP, BEYOND SPACE, and D-STATION I & II. These Games all operate at high rates of speed and feature excellent graphics. It was a very special treat to preview them before their release for sale.

STAR TRAP presents the game player with a window view of the battle area from his spacecraft. Opponents fly direct at you. Other opponents also appear at the edge of your screen flying away from your position. Comparison to normal games ends here. The action is so fast that players must use a pause, operated by the 'P' key, to rest their tired hand after three (3) minutes play. The more successful you are at playing the game, the faster the action becomes until your wrist literally falls off your hand from exhaustion. The graphics are definitely "Arcade Quality" in the words of several players.

BEYOND SPACE presents a different challenge. This is a two player game with each player having a ship of equal firing power. The area in space is littered with asteroids which may be moved by firing your spacecraft's laser. Every set of players eventually ended up pushing asteroids back and forth until one of them failed to react swiftly enough and was destroyed. Arcade quality graphics and instant response of space ships to joystick movements are only possible in Assembly Language. The speed of game operation is, in fact, almost too fast. More asteroids will destroy your ships than an opponent until control of the spacecraft is mastered.

D-STATION I & II are an interesting pair of games. A helicopter and aircraft fly past a fixed gun emplacement. The helicopter drops paratroopers while the aircraft bombs your gun emplacement. Your defense is to shoot all items out of the sky before you are bombed out or overran by enemy troops. The D-STATION I version is a slow warup for the II version of this game. Of course, the more successful your defensive effort, the faster opponents assault your defense efforts. It can get extremely fast-paced for experienced players in the II version of D-STATION.

The first two games appeal primarily to children over the age of fourteen (14). No upper age limit is specified for game players. D-STATION is oriented towards children ages eight(8) to fourteen (14) based upon our observations during the evaluations. Adults enjoy STAR TRAP more due to its extremely high speed action. All the games were designed to be used with the TI joysticks. The games will be available in Cartridges from:

SUNWARE LTD.  
PARK TOWER, SUITE 140  
LUBBOCK, TX 79405  
(806) 747-2534

Contact the firm above for prices and product availability. No date on their release was provided to our organization. We wish to thank John for making these excellent games available for review prior to their public release.

PRODUCT REVIEW - "THE MISSING LINK"

THE MISSING LINK is a printer interface that connects to the joystick port of the TI-99/4A. It is designed and manufactured by MIDWEST ENGINEERING CONSULTANTS. George Bowman, MSEE, MBA, is the owner of the firm and designer of THE MISSING LINK. The package of documentation accompanying this device is substantial. All aspects of the unit and its operation are discussed in detail.

The package includes a cassette tape of programs for use with THE MISSING LINK. The tape includes the following programs:

SIDE A - General Utility Programs

- 1) Minimemory Algorithms (Use MMM "Load" Utility)
- 2) Ascencion Program (Home Security/XBasic Slow Speed)
- 3) Engineering Programs (3 Combined/XBasic)
- 4) General Programs (3 Combined/XBasic)
- 5) Ladder Network Program (XBasic/Slow Speed)
- 6) S Parameter Matching (XBasic)

SIDE B - Word Processing Programs

- 1) Minimemory Word Processor (Basic w/Minimemory)
- 2) Disk System Word Processor (XBasic/Disk)
- 3) Extended Basic Word Processor (XBasic)
- 4) Bonus Program!!!! (Basic)

Note: The "High Speed" versions may be ordered on Disk for an additional \$4.00 fee.

The features of this unit are:

- 1) A high speed printer link at 200 CPS when used with the TI Minimemory Cartridge.
- 2) No modifications are required to the TI-99/4A or printer. Plugs on unit are compatible to both computer and printer.
- 3) Unit totally of modular construction with bright LED display and high impact plastic case.
- 4) No external power supply needed, low 5 volt design, low power from printer.
- 5) 35 pages of documentation including schematics, program listings, and detailed operating instructions.
- 6) Low speed option available for use with BASIC or X/BASIC. X/BASIC operates with or without a P.E.S.

The unit is not intended as a substitute for the RS-232 card or unit. It will only operate a printer with a CENTRONICS parallel port and not printers with serial ports or modems. The unit's speed of operation in BASIC or X/BASIC without the P.E.S. is four (4) cycles per second.

THE MISSING LINK was designed with a minimum system configuration of the 99/4A, cassette recorder, and monitor needed to operate with it. The TI Minimemory, if available, allows operating the printer at the 200 CPS rate with a minimum system. The system's inventor uses a GEMINI 10X printer with the unit. All types of word processing programs work with the unit, whether cassette or disk based.

The price for this unit is only \$40.00 (\$36.95 plus shipping) to your door. You may obtain more information or purchase the unit from:

# IMPORTANT PERIPHERALS

## For Your Texas Instruments Personal Computer

**\$309**

**Direct-Connect Printer, GP-100TI**

Because of our built-in interface, all you have to do to connect a GP-100TI printer to your Texas Instruments 99/4A computer is plug it in. The GP-100TI has adjustable tractor, cartridge ribbon, uses standard fan-fold paper and has full dot-addressable graphics. It provides clear, dot-matrix printout from all TI software including cartridge, which allows you to set number of line feeds per line, line length, margins and self-test. Another plus — expansion modules can be daisy-chained through the built-in edge connector.

**\$99**

**ParallAx TI Expansion Interface**

You no longer have to settle for Texas Instruments' bulky expansion box with its messy cable when for just \$99 you can connect any parallel-input printer to your TI computer using our ParallAx TI printer interface. It's smaller, neater, and plugs into the side of your TI computer. ParallAx TI has the same features as our GP-100TI printer (described above) and you can daisy-chain expansion modules through the built-in edge connector.

**THESE QUALITY AXIOM PRODUCTS ARE AVAILABLE AT LEADING DEPARTMENT AND DISCOUNT STORES.**
