MYARC PRODUCTS SHOWN, DESCRIBED TO DVUG

Myarc's new TI-99/4A-compatible computer, still unnamed and working out the last mechanical holdups, should be demonstrated by company president Lou Phillips at Illinois' TI Faire in November.

Actual release date is still pending. Myarc's product will come with 256K, upgradable to 512K. An IBM compatibility card will be a future offering. So said Myarc administrative vice president Norm Freedman, addressing the Delaware Valley Users Group meeting in September.

Myarc's Extended Basic II, 128K Operating System, cartridge was brought to the DVUG meeting, but a demonstration disk sent by mail had not arrived. After offering to show it at the next convenient DVUG meeting, speaker Freedman outlined structural contrasts with TI's Extended Basic (see page 5).

Use of all-assembly language routines replaces TI's Graphic Programming Language. (TI still is very much involved in production of the 9918A chip, we were assured.) Detailed programming capacity and execution speed become significantly greater with the extra memory.

This was demonstrated with the Myarc RAM Disk card as approximately six dozen DVUG members watched on four monitors, chained by a series of \$2.50 Y-cables. (Attendance was limited due to Hurricane Gloria's imminent arrival.)

The initial 32K is extra programmable RAM, similar to TI's 32K card. The next 96K memory, via upgrade or built-in, depending on one's purchase, may be used at owner discretion. (Cont'd. on page 4)

FROM "HARDCOPY"
FOREST LANE USERS GROUP
GARLAND, TX

We have news on a new book being published for the '99!! It is titled:

CRACKING THE 99/4A

This special advertises a PRE-PUBLICATION discount of 20% off the cover price for the book "CRACKING THE 99/4A" by Brian Prothro and illustrated by Wiley Atkins. An intermediate level book with a good explanation of the inner-workings of the TI. Orders for the discount must be post dated no later than NOVEMBER 7th, 1985. After this date, the cover price applies. Delivery is said to be in time for Christmas.

BOOK.....	\$10.35
DISKETTE.....	\$ 5.55
BOTH.....	\$13.55

900 RUN "DSKX.1234567890"

```

This version turns off the Quit key, restarts itself rather than crashing on an I/O error, and has pre-scan for faster start-up. It displays disk name, sectors available and sectors presumably used - it also totals up actual sectors used and sounds a warning if any sectors are not accounted for.

It lists up to 127 programs and files by number, filename, number of sectors, program or file type, file record length, and write-protection. It will stop for menu selection on any keypress or at the end of each screen, continuing on Enter. It will load and run any program that can run from Extended Basic, displaying its filename while loading. If the filename ends in an asterisk, it will warn you to return to Basic. It will delete any unprotected program or file, after first requiring verification by filename, or will inform you if the file is protected. It will read any readable file, including internal numeric, and list it to screen or printer. It will dump a catalog of the disk to your printer, and it will offer the option of quitting or rescanning the disk or another disk. And it's free, I don't even want a freeware donation - but I would appreciate if you would take a look at my catalog and see if,

somewhere among those 140 programs, there might be something you would be willing to pay \$3 for? The Menu Loader is included as a bonus on every disk I sell!

Jim Peterson

CAVEAT EMPTOR: N. A. G.

Guy-Stefan Romano of the AMNION HELPLINE (page 6), who has been giving personal assistance to TI-99/4A users since 1981, advised us that he's received over 150 calls from around the country which he described as complaints about the National Assistance Group, referenced on page 6 of this DATA BUS issue.

Romano notes that their product items which you may purchase after procuring a "membership" have included public domain software under other names, such as the Apesoft demo disk NAG lists as "Super Colossal Graphics" and, according to Romano, our own Steve Lawless' MassCopy as a sale item called "Super Disk". (Prices for commercial products are generally above the major catalog sources, too, he says; where's the membership benefit?)

Romano makes other allegations, which generally amount to questioning the bona fides of the NAG.

The DATA BUS contacted Ed York, President of the Cin-Day User Group, who has run the notices about NAG's CPM card in their UG newsletter which were the basis for our comments (on p.6, and in July at p.9). He states that he was given that data by NAG's Dr. Richard Kurtz, over the phone. York has no written specs.

The NAG had sent Cin-Day two membership applications. In the three months since they were mailed back with the \$10 checks, only one newsletter has been received, and no other follow-up. While other publications, to be unnamed, have matched such slowness of response, mailing ~ or lack of it ~ regarding product orders with that delay may cause certain legitimate concern.

The DATA BUS has had no contact with the NAG, and the Delaware Valley Users Group has formed no opinion about it.

As with all groups with whom individuals are personally unfamiliar, contacts with local Users Groups may give you the information you need to evaluate such an operation. All product information that appears in this newsletter is provided for information purposes only. The Delaware Valley Users Group does not make commercial endorsements. Unsigned articles are written by the DATA BUS Editor.

MYARC PRODUCTS ... (Cont'd. from Page One)

Any amount of the extra memory above the initial 32K can be allocated to the printer buffer, or "spooler", while the rest is available as additional program workspace. One use shown formatted the RAM Disk into an emulated DSK1., rapidly running TI-Writer and Multiplan files that had previously been loaded into the RAM Disk memory, and simultaneously letting one dozen pages print from the buffer left from another program.

Speedier operating execution was attributed to the solid state elements in the memory expansion card, as well as to the added memory. Freedman used the new 512K card for a demo, but noted that the principle was the same for a 128K card.

With suggestions from a few DVUG members who'd recently obtained Myarc's new Disk Controller Card, Freedman then used several routines from the disk-based "Disk Manager III". Included were CALL DIRectory functions loaded from TI Basic without affecting programs in RAM, and a few assembly language functions, such as CALL LR (like "Call Load"), and CALL LLR (like "Call Link").

These presentations came after an engrossing account of Myarc's involvement with 99/4A products over the past three years. The New Jersey-based firm developed its interfacing Personality Card to run Winchester hard disks in 1983, for TI's international business market and small cost-conscious U.S. concerns. The Mini-Peripheral Expansion System was released in 1984 to meet upgrade needs, as TI's P-Box supply appeared exhausted.

Accordingly, Myarc's products were designed for compatibility with the MPES when an unexpected source of additional TI P-Boxes was found. Myarc then issued its components in separate card format, even redesigning the disk controller to read non-standard (i.e., CorComp) format which had developed popularity in the TI marketplace. Additional P-Box availability, and earlier 99/4A users seeking new capabilities, led to the current trends.

C.R. Distributing, (404) 928-8791, provides local retail outlets, or order directly from Triton, (800) 227-6900, if you wish a quick source of Myarc products.

HBMPRINT

By John Phillips

Writers Association NL 8/85

I thought I would postpone another assembly language article and replace it with a new, exciting, FREE product from BUEHRER-HAHN SOFTWARE. This product is called HBMPRINT, and it does exactly what you think it does: it prints the results of your calculations from the Household Budget Management cartridge (PHM3007).

Ever since HBM was released by TI, there have been complaints about it not being able to print the results. I personally have wished time-after-time that a utility would be developed, so I could make a hardcopy of my expenses. It would be great for tax purposes. Nothing had ever been written to perform such a task. Well, faithful HBM users, the miracle has happened. Written by Bob Lawson, HBMPRINT is now available. This nifty little utility is written using TI-FORTH, and is a treasure! The best part of all is that it is FREE! That's right . . . absolutely free.

This software is in the domain of FREEWARE: software produced by dedicated individuals, who ask very little in return. Mr. Lawson has kindly agreed to allow this software to be copied freely and distributed to anyone desiring a copy. I am making a personal request: Anyone receiving a copy of this program, and using it please send a contribution of up to \$10.00 to Mr. Lawson, at the address listed at the end of this article. This software is worth much more than the asking price, I assure you.

To describe the program is relatively simple. One needs a full TI expansion system with a printer and an Editor/Assembler cartridge. The program is loaded via option 3 (LOAD RUN) and is self-starting. A title screen is displayed and then your output device is requested. Once the output is secured, the software is nice enough to ask if you have a one or two-drive system. If you have only one, the software prompts you for the disk swapping. From this point, your HBM file is loaded into memory.

As with HBM, the header information is displayed showing the household name, year and last activity date. A very nice touch. There is a prompt asking you if this is the correct data. If not, you get another chance to try a different disk. Once the header is

verified, the software prompts you to adjust the top-of-paper. From there, it proceeds to the print option menu, which contains many entries. You may print your data in a variety of formats (all chosen from the menu). For example, one category by month, all categories by month, all categories for year-to-date, all categories for the entire year, etc. There are also some options to load different data from this menu.

A very nice feature of the program is the ability to divert the output of any device you want. For instance, if you are unhappy with the formats given, you may divert the output to the disk (DIS/VAR 80 format). Then you can edit the data, using the TI-WRITER or E/A text editors. In my opinion, this is a very important feature.

All-in-all, this is a much needed, long overdue utility to help the users of HBM. I want to personally commend Mr. Lawson on his efforts to fill this gap. As mentioned before, if you are planning to use this software, please send Mr. Lawson whatever you feel the software is worth. You may send your contribution to:

BOB LAWSON
16223 MILL POINT DRIVE
HOUSTON, TX 77059

If you cannot locate a copy of the software, please contact Mr. Lawson at the address listed above. Be sure to include a contribution which will cover his time, disk cost, and mailing costs.
