

## Personal. Powerful. Compact Computer 40.

- 34K bytes of ROM • 6K bytes of RAM • Constant Memory™ Feature
- Convenient plug-in applications software • Enhanced BASIC programming language
- Easy-to-use typewriter-style (QWERTY) keyboard • Battery-powered
- Easy-to-read 31 character LCD display • Peripheral interface connection for easy expansion
- Weighs only 22 ounces
- Measures 9½ x 5¾ x 1

Mfr. Sugg. Ret.

### Customize your Compact Computer 40 with a variety of low-cost peripherals.

TI's Compact Computer system utilizes the exclusive Hexbus™ Intelligent Peripheral Interface — a distributed computing concept in which each peripheral has its own microprocessor. This allows the internal memory of your computer to be used for solving problems instead of being wasted controlling the peripherals. The following peripherals are currently available:

- **RS232 Interface: HX-3000.** You can connect directly to serial input printers and modems. Or, add an optional cable to connect to parallel input printers.
- **RS232/Parallel Interface: HX-3000/P.** Same as above with parallel cable included.
- **Printer/Plotter: HX-1000.** The printer offers you 10 different type sizes and up to 36 characters-per-line on standard 2¼ inch paper for a permanent record tape. An x-y plotter provides four-color capability for pie charts, trend line graphs, and more.
- **Wafertape™ Digital Tape Drive: HX-2000.** Offers cartridge capacity up to 48K bytes with data transfer rates of 8,000 bits-per-second. Reliable storage capacity and fast access to programs and data are additional benefits of this unique peripheral.
