

BUGBYTES

December 1997 / January 1998

Editor's Note

Dennis Remmer
dennis@dstc.edu.au

Mornin' all...

The next meeting will be the Christmas dinner, to be held at 7p.m on Wednesday night, 26th November at the Buffet Garden restaurant, Sunnybank Plaza (cnr Mains Rd & McCullough St), Sunnybank.

This issue there's some useful vendor information, a full review of the recent 1997 Chicago TI Faire, a full listing of the TI CDROM files available now on the Internet, and some other bits n pieces.

A true story apparently... At a recent computer expo (COMDEX), Bill Gates reportedly compared the computer industry with the auto industry and stated "If GM had kept up with technology like the computer industry has, we would all be driving twenty-five dollar cars that got 1000 mi/gal." Recently General Motors addressed this comment by releasing the statement "Yes, but would you want your car to crash twice a day?"

:-)

Have a safe and happy festive season.

Best Regards...

Cecure/Myarc Changes

Tim Tesch
ttesch@juno.com

As of October 22, 1997, Myarc software/hardware upgrades, repair, and distribution will be managed by Tim Tesch.

I spoke at length with Don Walden about Myarc's future. After some discussion, he accepted my offer to assume responsibility for all Myarc-related aspects of Cecure Electronic Inc. Don will maintain responsibility for all remaining aspects of CEI.

It may take a few weeks to go through the existing paperwork and equipment, and I am not going to make this my second full-time job. However, I will put forth the effort to complete outstanding requests as well as make way for some new ideas Don and I have for Myarc as well as begin to accept new requests.

I ask that ALL PEOPLE with outstanding Myarc requests (Geneve, HFDCC, Floppy Controller, SOFTWARE, etc.) contact me as soon as possible. Doing so will allow me to estimate the workload for the next few weeks as well as evaluate those requests which may have to be denied in the interest of the customer.

Future plans may include a Myarc-only line which would be answered on the day(s)/evening(s) I am at Cecure. A set time window would be established so as to not interfere with "real" work.

Email correspondence for MYARC questions should go to

ttesch_myarc@juno.com

This account is active as of 10/22/97 and will be the focal point for all online inquiries. Snail mail may be sent to my home address until a suitable PO Box can be obtained.

Tim Tesch
1856 Dixie Road
Port Washington, WI 53074

Please DO NOT send equipment to my home address!

Thank you,
Tim

Vendor Thoughts

David L. Ormand
dlormand@aztec.asu.edu

As a member of the SW99ers (who objects somewhat to being referred to as a b**d), I would like the people in the community to consider something.

CONTENTS

Editor's Note	1
Cecure/Myarc Changes	1
Vendor Thoughts	1
1997 TI-Faire	2
Microsoft Excel-Doom	3
Misc. 'Net TI Resources	4
TIBUG Information	10

We have enough problems with the relationship of the "consumers" in the community with the "vendors". And maybe it's not just OUR community, since I see the same thing in the Atari world, but the "consumers" really tear into the "vendors" upon not receiving professional service, even though the "vendors" are usually not Companies, in the proper, traditional, "professional" sense.

We have some outfits like Western Horizon Tech and Cecure - one man operations, please note - who do the best job they can under the circumstances. They are working on their projects with all honest sincerity, and if they have to work real jobs to put food on the table and the TI projects get shuffled to the back burner, why should the "consumers" be so aggravated when orders take a long time, returned materials get shelved, and technical perfection is evasive? Come on, people, let's give them a break!

Same thing goes for the one-man sales outfits, like RamCharged and Competition, and even TexComp. If it weren't for these, there wouldn't BE much of a TI community. So let's be patient and helpful. We're all in this together.

Flaming "vendors" publicly does NOTHING favorable for the community. Unless you have clear and indisputable evidence of a "vendor" taking TIers for a ride, you should deal with the "vendor" himself and not flagellate them publicly in the List. Or even at the User Group meeting. (this one's for Matt.)

[I'm not even sure Bowser was intentionally trying to cheat TIers, even though that has become his reputation. The TI community lost a technical whiz, nobody got their money back, a lot of bad feelings resulted, the licenses for TIM will never be released... in short, NOTHING FAVORABLE was accomplished.

Now, that fellow at the Fest West a while back taking orders for an IDE interface that existed only on paper - a man who was unheard of in the community before, and never heard from again - HE might have been intentionally trying to pull a

fast one. But Bowser? Tell me he was really trying to cheat anyone.]

I am very thankful for the TI vendors. And if I had more bucks, and more time to play with toys, I would probably patronize their services more. Thank you, TI vendors. And that includes shareware developers, too. Thank you!

Now, as far as the SW99ers are concerned, we don't even pretend to be a Company. We are a User Group. We just happened to get in on the Super AMS project. The various members of the UG are not in constant contact with each other. The mail gets picked up every two weeks or so by a member who may or may not make it to the General Meeting or the Executive Meeting. A phone call to one member does not guarantee that everyone else is in on the secret, especially the president and spokesman of the UG. The actions of a developer (Shawn Baron), a convenient rep (Mike Doane), and the Holders of the AMS Assets (Jack and BJ Mathis) are not coordinated. And I am aware of two AMS test programs we have used, but have no idea which one is packed in with new sales, or what state/revision it is in, or who is responsible for the revision. Nor do I care that much, as long as it does the job for people who need it.

We have been clobbered by people who ask for information but never get it, because the man who takes the phone call forgot, or waited until the General Meeting to mention it and the responsible party did not show up at that particular General Meeting. Et Cetera. This does not indicate we are b**ds. It indicates we are a User Group, and our efforts are weakly coordinated at best. We did not incorporate for the purposes of business, and our structure does not support business very well. All the same, we are responsible for warranty service on the card, even in cases where the "consumer" plugged it in backwards, was using the software utilities wrong, tried to fix it himself with a soldering gun... Et Cetera. All "warranty" repairs are done by Jack Mathis on his own precious and rare free time. In retrospect, it would have been better to issue the SAMS with NO warranty. "We are not a business, so if you buy it, you own it." But how many people would have bought under such an onus?

So my reflection on the subject is, if Tom blasted Bob, he did it in ignorance (although probably he should have gotten the facts before making a public statement), and if Bob blasted Tom back (and the rest of the SW99ers with the same broad brush), he did it (a) not recognizing the nature of the "business" he was dealing with, and (b) with no consideration of the impact his statements might make. It's hard enough keeping the SW99ers together without being called names.

And it's not just Bob. It's our whole approach to grievances. If you have a grievance, and you don't have clear and indisputable evidence that the "vendor" is out to cheat the community, PLEASE DON'T MAKE YOUR GRIEVANCE PUBLIC. It does NOTHING favorable whatever.

1997 TI-Faire

Gary W. Cox

The annual Chicago TI Faire was held November 8th at the Evanston Library in Evanston, Illinois. Attendance was quite low this year with only about 50 people attending the event and some notable vendors were missing!

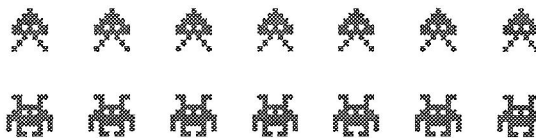

However, despite those who were missing a variety of seminars were held through out the day and some bargains could be made. Bruce Harrison of Harrison Software was the first to demonstrate his products starting with SCSI CAT. SCSI CAT is a new cataloger program which will catalog a SCSI drive as well as disk drives and ramdisks.. Bruce's main demonstration was a new improved version of Midimaster 99. Midimaster 99 will work with or without the AMS card and now includes a much wider octave range and a variety of additional features and bug fixes... Other products Bruce demonstrated was an addition to video titler which now includes 23 transition wipes and a new catalog feature. Upgrades for video titler are \$1 if for those who already own the program or \$7 for a new copy. Also updated is AMS slide show with additional features and bug fixes.

Mike Wright of Cadd Electronics demonstrated the latest version of PC-99 TI99/4a Emulator for PC's. Besides a variety of bug fixes the new version has what is called "aspect mode" which displays the screen all centered instead of offset as in previous versions. Added to the debugger was the ability to see GPL instructions as they execute. Those with microchannel PC's the com ports are now working and now included is Myarc 512k card emulation and Myarc XB2 as well as AMS emulation. PC99 is becoming a quite impressive program!!!

Vick Sterrup who had a huge assortment of software from Asgard Software represented Ramcharged Computers. One item that I have not seen in a while was the Thorn EMI game software, which includes some impressive games for the 4a! Another item that I have not seen before was recipe writer and some additional recipe's to go along with it. All in all Ramcharged computers has a large assortment of products new and old so if you are looking for a product that is no longer around check with Ramcharge Computers as they may have that product in their stock! Additionally they still had a few Prosticks along with plenty of parts to repair old Prosticks with the exception of the cases. Vick noted that if you have a Prostick that is bad or no longer want please send it to Ramcharge for recycling!

Bud Mills of Bud Mills services had a variety of items at his table... Bud

mentioned that he is starting a new run of the Horizon 4000 cards so those who want a new Horizon Ram Disk can order them now! Bud also mentioned he will be publishing a fix for the P-GRAM card which corrects a problem of program loss when a system is powered off. The modification basically includes adding a resistor and diode that anyone with soldering iron can do themselves.

Dan Eicher and Jeff White were present representing the Hoosier users group with a variety of publications. Dave Connery had his impressive Geneve system setup and running. Charles Good of the Lima users group had his usual assorted library including the Jim Peterson collection available for copying. The Will County users group had a variety of program disks and blank disks for sale. The Chicago TI Users Group had their software library available as well. Barry Harmsen of the Dutch TI Users Group discussed new products in production from Europe... Cerebral Software had a table which provides custom software for the TI and other platforms and will be the future home of the Chicago TI Users Group Home Page on the Web. The Mid-South TI99/4a Users Group (Memphis) had a variety of consoles and other equipment for sale as did the MADHUG Users

Group and a variety of other people had quite a few pieces of equipment for sale as well.

All in all it was still a good time and good to see all the TI regulars. Make it a point to attend a TI faire this year and keep the TI alive!

VENDOR LISTING

Gary Cox of the Mid-South TI99/4a User Group

Microsoft Excel-Doom

Dennis Remmer
dennis@dstc.edu.au

Courtesy of someone I know at BHP IT...

Here's an easter egg for Excel v7.0 for Office 95 users:

- Start MS-Excel with a new blank worksheet,
- scroll to row 95,
- select the entire row (click at row header),
- <TAB> to column B,
- Click on 'Help..About MS Excel',
- Press down <Ctrl><Shift> keys and click on the 'Tech Support' button (at the same time)

You then get a small Doom-like game window titled 'Hall of Tortured Souls' which you can navigate with the arrow keys! Note the scrolling developer list on the walls...

There is another Doom-like addition. Near the stairs, turn around 180deg and type in 'excelkfa'. Another room, which seems impossible to get through...

Anybody know any other cute hidden aspects to well known programs?

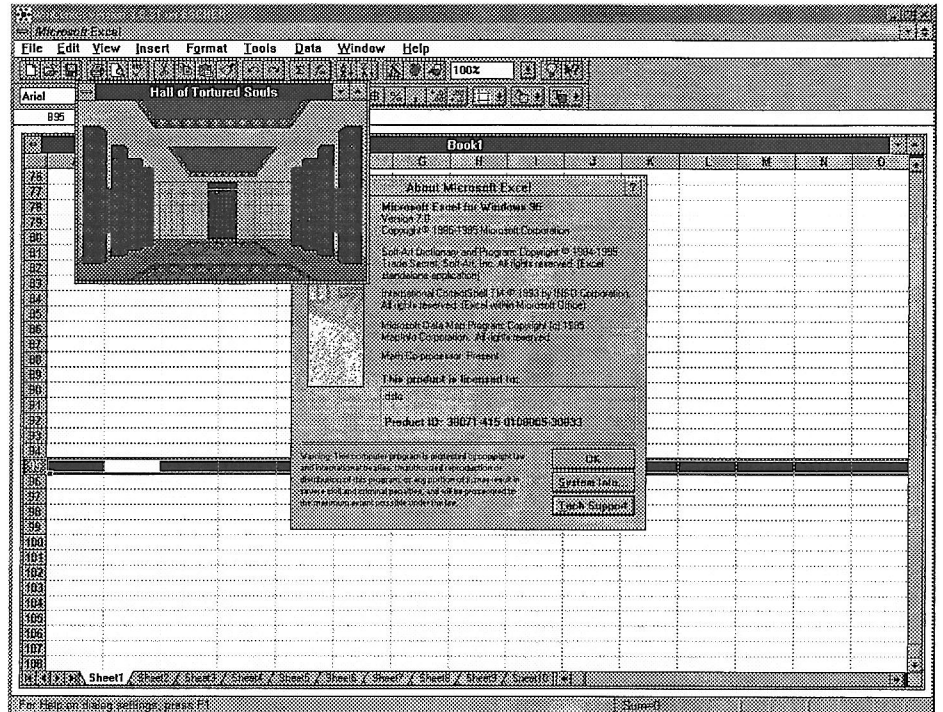

Misc. 'Net TI Resources

Dennis Remmer
dennis@dstc.edu.au

I thought you might be interested in a few extremely useful TI resources available on the Internet. Its getting to the stage where almost anything you can think of, in terms of information, programs, archival material, etc is becoming readily available.

TI CDROM Files

All the files for the TI and Geneve compiled by Beery Miller (Beery_Asst@msn.com) for his

comprehensive CD-ROM are available across the Internet via ftp (file transfer protocol) at the following address:

```
ftp://ftp.premierweb.com/  
pub/systems/ti99/ti-cd
```

The above address will work best in your browser (Netscape or Internet Explorer). Any text files should be directly usable. In the CAT10 directory below, you'll find a zip-compressed PC tool [unark120.zip] to un-archive the .ARK format files to your PC¹. Getting files to your TI or emulator is another story, I'll check it out and report next issue. The complete contents listing appears at the end of the article. Note that the CD contents are subject to change, so the listing may not always be 100% accurate.

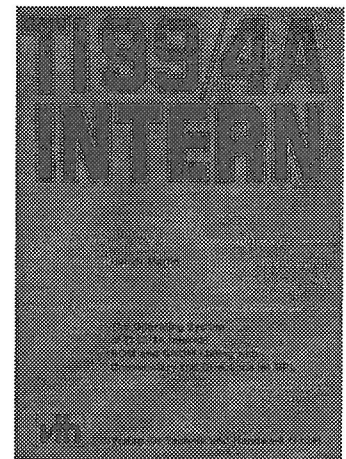

TI Intern Book

The very useful reference book TI-Intern has been digitised and placed on the Net in Adobe Acrobat format (a widely used document interchange format for the Net), available from the following Web address. To examine this file, you will require an Acrobat reader, which you

1. In other words you'll find an archived unarchiver to unarchive the archived files to your archive... :-) Don't you love this industry...

can obtain for your PC/Mac/etc from a link on the same page:

```
http://members.aol.com/  
lapinkult/ti/intern.htm
```

All items within this newsletter may be reprinted providing the source and author are acknowledged. The views expressed in articles published in TIBUG are those of the author and do not necessarily reflect the views of the Editor, Committee Members or Members of this User Group. All items, articles, programs etc. in this Newsletter are believed to be public domain.

Contributions to TIBUG are invited from both members and non-members. Articles for inclusion in the succeeding bi-monthly newsletter are required at least two weeks before the monthly meeting and may be included in that newsletter at the discretion of the Editor.

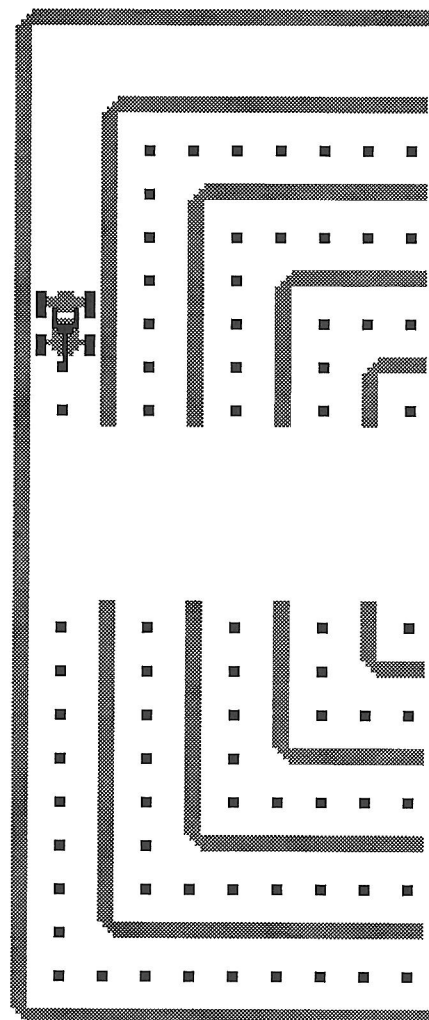

Most original articles by members of TIBUG in this newsletter are on available on disk and are available to other User Groups on request.

Submissions of articles, reviews, comments and letters from members is encouraged, however the Editor asks that those submitting keep the following in mind:

Submissions should be about the TI Community in particular, computers in general, or of sufficient general interest. The preferred media is computer file, preferably in ASCII (Text) or Microsoft-Word compatible format, submitted on MacIntosh or IBM-compatible floppy disk or via Electronic Mail to the Editor. Handwritten submissions are acceptable but please remember that they have to be retyped. Other submissions, such as typed, printed or photocopied are welcome but must of reproducible quality.

Submissions are best sent directly to the Editor:
